## STRETCH CEILINGS OUR LATEST PROJECTS TOKYO THEATRE

STRETCH CEILING SYSTEM provides interior design solutions that gives you the ability to design third dimensional shapes, reflective mirror surfaces and illuminated modules using led lighting on ceilings and walls. Photo printing is also possible on all membrane textures such as glossy, matt, satin, transparent and metallic, leaving amazing breath-taking aesthetic results. It can be installed directly to any basic ceiling to either decrease the height or using reflective membranes to create a plasmatic depth and height to an extremely low ceiling. The installation process is clean, quick and easy maintenance.

The STRETCH CEILING SYSTEM is ideal for areas affected by humidity as it does not alter the membrane shape or color. Stretch ceilings are moisture-resistant, mold free, anti-bacterial & anti-micro-organisms. Suitable in all domestic and commercial areas including cruise vessels, hotels, bathrooms, indoor swimming pools, hamam, gyms, spas, airports, restaurants / bar, retail stores and many more.
